

In this code lab they explain where we can find the documentation of android developer.android.com. And they explain which are the exactly different page for every important information in android like style, animation, documentation, etc

We learned how we can use image asset for made our own icon for the app

We learned about the templates and how just the Basic Activity architecture have to many parts like Status bar, action bar, Application name, FAB, etc... Also we learned how to add new Activities with templates thanks to the help of Android Studio

We learned that we can get example project and I never saw this, it's cool , also they show us how we can get documentation offline, but we already practice this in the first week

The recommend us many placers for keeping up about android like the youtube channel, the blog is amazing <https://blog.google/products/android/>, and of course Stack Overflow
